Conversational Programming Interface

View U.S. Patent No. 9,959,868 in PDF format.

WARF: P170144US01

Inventors: Jignesh Patel, Navneet Potti, Rogers Jeffrey Leo John

The Invention

Domain specific programming is facilitated through the use of a conversational interface using natural language commands from the user and natural language cues to the user. The natural language conversation provides the actual program and thus can be saved and edited for future use.
