Sub-Critical Gas-Assisted Processing Of A Polymer Blend

[View U.S. Patent No. 11,623,381 in PDF format.](#)

WARF: P180120US01

Inventors: Lih-Sheng Turng, Thomas Ellingham

The Invention

A method of processing of a polymer blend is provided. The method includes the step of introducing a polymer material and a secondary polymer material into a barrel of an extruder. A user-selected gas having a supercritical point is injected into the barrel. The user-selected gas is below the supercritical point thereof. The polymer material, the secondary polymer material and the user-selected gas are mixed within the barrel to form a polymer blend. The polymer blend is ejected from the barrel into a mold, pelletizer or the like.
