

Non-Line-Of-Sight Imaging System For Distant Measurement

[View U.S. Patent No. 11,500,091 in PDF format.](#)

WARF: P190156US01

Inventors: Andreas Velten, Marco La Manna

The Invention

An improved non-line-of-sight camera provides for real-time evaluation of a relay wall with respect to illuminated points and sensing areas for higher accuracy and practical field use. Gated sensing allows improved recovery of faint photon signals and higher resolution. The system allows an operator to find a virtual camera from looking around multiple corners.
