

METABOLOMIC BIOMARKERS FOR ACUTE KIDNEY INJURY, ASSAYS, COMPOSITIONS AND METHODS OF USE THEREOF

[View U.S. Patent Application Publication No. US-2025-0341515 in PDF format.](#)

WARF: P240274US02

Inventors: Joshua Coon, Matthew Harer, Paige Condit, Katherine Overmyer, Nicole Nightingale, Chase Schoenenberger

The Invention

UW-Madison researchers have identified a panel of metabolites that could be useful indicators of AKI. A prospective observational study of NICU patients was completed, including the collection of urine samples from 40 preterm neonates, 5 who developed AKI, and 35 who did not. After collection, the researchers completed a metabolomic analysis and identified ~ 20 metabolites that are significantly different for those having AKI compared to those who do not. With some additional refinement, the researchers believe that this panel could include biomarkers useful in predicting/diagnosing AKI in infants. Further, these biomarkers can be detected much earlier than serum creatinine, enabling a more rapid/timely assessment.
