

Unique, Full-Length Mouse cDNAs

WARF: P03413US

Inventors: Christopher Bradfield

The Wisconsin Alumni Research Foundation (WARF) is seeking commercial partners interested in a collection of 10,000 mouse cDNA clones.

Overview

The study of full-length cDNA clones is important for determining the structure and function of genes.

The Invention

A UW-Madison researcher has developed a collection of 10,000 mouse cDNA clones. Based on sequence analysis, over 90 percent of the clones are full-length.

Applications

- Functional genomics and pharmaceutical studies

Key Benefits

- 90 percent of the clones are full length.
