

Compounds And Methods For Treating Seizure Disorders

[View U.S. Patent No. 7,795,227 in PDF format.](#)

WARF: P04134US

Inventors: Thomas Sutula, Avtar Roopra, Steven Kriegler, Carl Stafstrom

The Invention

This invention provides methods for alleviating paroxysmal disorders in an animal, particularly epilepsy, by modulating glycolysis in brain cells.

Stage of Development

The development of this technology was supported by WARF Accelerator. WARF Accelerator selects WARF's most commercially promising technologies and provides expert assistance and funding to enable achievement of commercially significant milestones. WARF believes that these technologies are especially attractive opportunities for licensing.
