

17,20(e)-dehydro Vitamin D Analogs And Their Uses

[View U.S. Patent No. 7,241,752 in PDF format.](#)

WARF: P06117US

Inventors: Hector DeLuca, Margaret Clagett-Dame, Lori Plum, Bulli Padmaja Tadi

The Invention

This invention discloses 17,20(E)-dehydro vitamin D analogs, and specifically 17(E)-1 α ,25-dihydroxy-17(20)-dehydro-2-methylene-19-nor-vitamin D3 and pharmaceutical uses therefor. This compound exhibits pronounced activity in arresting the proliferation of undifferentiated cells and inducing their differentiation to the monocyte thus evidencing use as an anti-cancer agent and for the treatment of skin diseases such as psoriasis as well as skin conditions such as wrinkles, slack skin, dry skin and insufficient sebum secretion. This compound also has little, if any, calcemic activity and therefore may be used to treat autoimmune disorders and inflammatory diseases in humans as well as renal osteodystrophy and obesity.
