

Vaccines Comprising Mutant Attenuated Influenza Viruses

[View U.S. Patent No. 10,130,697 in PDF format.](#)

WARF: P100251US02

Inventors: Yoshihiro Kawaoka, Shinji Watanabe, Tokiko Watanabe

The Invention

The invention provides a vaccine comprising an effective amount of an isolated recombinant influenza virus comprising a mutant M gene segment that is mutated so that upon viral replication the mutant M gene expresses a functional M1 protein and a mutant M2 protein with a deletion of the cytoplasmic tail and either lacking a transmembrane domain or having a mutated transmembrane domain.

Tech Fields
