

Combatting Parasitic Worms in Livestock and Other Animals

View U.S. Patent No. 9,821,028 in PDF format.

WARF: P140283US01

Inventors: Mark Cook, Daniel Schaefer, Mitchell Schaefer, Jordan Sand, Larry Smith

The Wisconsin Alumni Research Foundation (WARF) is seeking commercial partners interested in developing a method to fight gastrointestinal infections in cattle, poultry, pets and even humans using interleukin-10 peptides and antibodies.

Overview

The United States cattle industry includes about 40 million beef and dairy cows. At some point in their lives the majority of calves will graze and be exposed to parasitic worms known as helminthes. Worm-related diseases are a rife and costly problem in livestock, causing weight loss, gastrointestinal damage and often death.

Current therapies (e.g., de-wormers) have limited effect because the parasites have developed resistance. Haemonchus, or barber's pole worm, is one devastating species that infects the digestive system and resists worm-killing drugs.

Parasitic worms pose a major hazard to human health as well, causing malnutrition and suffering in underdeveloped nations.

The Invention

UW-Madison researchers have developed a method for treating gastrointestinal worm infections in animals and humans by administering interleukin-10 (IL-10) peptides and antibodies. IL-10 is a natural feed additive that can be ingested. Critically, helminthes have no known mechanism to develop resistance.

Applications

- Controlling parasitic worm infections in herbivorous mammals, including bovines, horses, free-range poultry, swine, dogs and cats
- Potential human usage

Key Benefits

- Treatment increases weight gain and feed efficiency.
- · Effective for parasitic worms that have developed resistance to other agents
- · Also helps protect against protozoa and bacteria
- · Limited side effects
- · Cheaper and easier to administer

Stage of Development

weCalves fed the H=10 antibodies and exposed to parasitio worms/including. Haemon chus, showed a 10-percent improvement in average delete daily weight gain and reducted eggu stread in the storing of cookies and related technologies on your device. See our privacy policy

The development of this technology was supported by WARF Accelerator. WARF Accelerator selects WARF's most commercially promising technologies and provides expert assistance and funding to enable achievement of commercially significant milestones. WARF believes that these technologies are especially attractive opportunities for licensing.
