

Inhibitors Of Collagen Prolyl 4-Hydroxylase

[View U.S. Patent No. 9,809,586 in PDF format.](#)

WARF: P150092US02

Inventors: Ronald Raines, James Vasta

The Invention

The invention provides biheteroaryl dicarboxylates and esters, and salts thereof which are useful generally as modulators of CP4H activity, more particularly as inhibitors of CP4H, or further as chemical genetic probes for the study of CP4H function and/or as synthetic intermediates for the preparation of such modulators, inhibitors and/or chemical genetic probes.

Tech Fields

- [Therapeutics & Vaccines : Skin & connective tissue](#)
