

Hybrid Tandem Solar Cells With Improved Tunnel Junction Structures

[View U.S. Patent No. 9,899,556 in PDF format.](#)

WARF: P160030US01

Inventors: Zhenqiang Ma, Hongyi Mi, Tzu-Hsuan Chang, Shaoqin Gong, Kanglin Xiong, Jung-Hun Seo

The Invention

Tandem solar cells comprising two or more solar cells connected in a solar cell stack via pn diode tunnel junctions and methods for fabricating the tandem solar cells using epitaxial lift off and transfer printing are provided. The tandem solar cells have improved tunnel junction structures comprising a current tunneling layer integrated between the p and n layers of the pn diode tunnel junction that connects the solar cells.
