

Apparatus For Assessing Human Balance Capability

[View U.S. Patent Application Publication No. US-2018-0132777 in PDF format.](#)

WARF: P170077US01

Inventors: Kreg Gruben, Wendy Boehm, Kieran Nichols

The Invention

An apparatus with one or more force plates senses of center-of-pressure and force-angle in the sagittal plane for a standing individual to provide an indication of balance capability based on the deduced functional relationship between center-of-pressure and force-angle within a limited band of frequencies. In one embodiment this relationship may be expressed as an intersection point of the force vectors with respect to the individual's center-of-mass.
