

## Genetic Testing For Inherited Peripheral Neuropathy

[View U.S. Patent No. 11,473,146 in PDF format.](#)

**WARF: P180279US02**

Inventors: Peter Muir, Susannah Sample, John Svaren

---

### The Invention

Methods for diagnosing propensity to exhibit acquired peripheral neuropathy in dogs are described. The methods and kits test dogs for presence of a disease-associated genomic variant. Presence of the genomic variant indicates an increased likelihood of the dog developing an acquired peripheral neuropathy. This information can be used to guide preemptive clinical treatment of the animal for peripheral neuropathy and to choose dogs for selective breeding programs.

### Stage of Development

The development of this technology was supported by WARF Accelerator. WARF Accelerator selects WARF's most commercially promising technologies and provides expert assistance and funding to enable achievement of commercially significant milestones. WARF believes that these technologies are especially attractive opportunities for licensing.
